

Preparatory work related to wastewater tunnel planning in the Flemingipuisto area

Dear residents of the Flemingipuisto area,

Turun Seudun Puhdistamo Ltd is investigating and planning a new wastewater tunnel near the existing Flemingipuisto sewer tunnel, as well as related network changes. **In connection with this, ground investigations will be carried out in the area during October–November 2025.**

Due to the ground research, drilling will be carried out, which may cause moderate noise disturbance to nearby residents. Drilling will take place between 07:00 and 18:00. On Stålarinkatu, some individual drillings may need to be carried out at night in order to minimize traffic disruption.

We apologize for any inconvenience caused by the work.

More information about the project

Location and schedule of the wastewater

The possible new wastewater tunnel will be located inside the bedrock between Kupittaankatu and Merimiehenkatu 4 (see indicative map). A maintenance building is planned in connection with the tunnel. The project is mainly underground.

The project has not yet received an implementation decision. The design phase will take place from June 2025 to June 2026. A possible implementation decision will be made in autumn 2026. Depending on the decision, construction could start in early 2027. The construction phase is estimated to last approximately three years.

Why is a new wastewater tunnel needed?

A new tunnel is being planned because the current wastewater tunnel is reaching the end of its service life. Renovating the existing tunnel would be very challenging, mainly due to the demanding and expensive bypass pumping required, which would cause significant disturbances to both the environment and traffic.

How will the impacts on nearby residents and the environment be considered?

During the planning phase, a risk assessment will be prepared to ensure that the project does not cause harm to the environment or properties, and to minimize disturbances during construction.
